

Ultimate Baccarat Strategy

WARNING!! This system is optimized for live baccarat tables — like those offered on platforms trusted by pros like Mikki Mase and Kirgo

Baccarat is one of the few games in the casino where discipline, psychology, and strategic betting can **genuinely shift the odds**. While most players chase luck, the smart ones follow systems.

This cheatsheet is based on the **Ultimate Baccarat System**, a structured pattern-based strategy that uses a refined Martingale method. It doesn't rely on counting cards or predicting outcomes, instead, it applies pressure over time through mathematical betting sequences. Think of it as a **systematic way to extract value** from short-term variance.

But make no mistake. this isn't what Mikki Mase does.

How This Differs from Mikki Mase's Play

Mikki Mase is a professional edge player. His success doesn't come from progression systems like Martingale. Instead, Mikki:

- Identifies **vulnerable casinos**
- Leverages **shuffle-tracking, pattern recognition**, and even **table manipulation**
- Plays **mini-baccarat** at high stakes with **insider-level knowledge**

In contrast, this system is for the **disciplined player** without insider access, someone who wants a mathematical system they can apply at **any reputable live casino**, whether online or in-person.

Still, the **mindset is Mikki-esque**:

- Controlled aggression
- Data over emotion
- Walking away when the edge isn't there
- Letting the house know you're not just another fish

Now you're ready to flip the odds.

Let's dive in.

SECTION 1: Baccarat Fundamentals (No BS Edition)

OBJECTIVE

Bet on the hand (Player or Banker) that ends up closest to **9**. That's it. You're not playing the cards, you're betting on who *wins* the round.

CARD VALUES

Card	Value
A	1
2–9	Face value
10, J, Q, K	0

Hand total = last digit of the sum

Examples:

- $8 + 6 = 14 \rightarrow \text{Total} = 4$
- $7 + 9 = 16 \rightarrow \text{Total} = 6$
- $10 + 4 = 14 \rightarrow \text{Total} = 4$

You can't go "over 9" — totals auto-reset to their last digit.

HOW A ROUND WORKS (Step-by-Step)

1. **Place your bet:** Player, Banker, or Tie.
2. **Cards are dealt:** 2 to Player, 2 to Banker.
3. **Natural win?** If either side has **8 or 9**, round ends.
4. **Third card rule kicks in** if no natural win:
 - If **Player = 0–5**, Player draws a card.
 - If **Player stands (6 or 7)**, Banker draws if Banker = 0–5.
 - If **Player draws**, complex Banker rules apply (don't worry, dealer handles it).

 **You don't control the cards — only the bet.** You never need to memorize draw rules. Focus on **who** to bet on, not **what** they draw.

BET TYPES & PAYOUTS

Bet	Payout	House Edge	Notes
Player	1:1	1.24%	No commission
Banker	1:1*	1.06%	*5% commission on wins
Tie	8:1 or 9:1	14.36%	High risk – avoid it

Optimal Play = Bet Banker 90% of the time (we'll break that in this pattern for a reason).

TIE RULES

- If **you didn't bet Tie** and the round ties → your bet is a **push** (you get it back, no win/loss).
- This System treats ties as **neutral** → repeat the same bet and step.

QUICK TIPS TO THINK LIKE A PRO

- Baccarat isn't about prediction — it's about **positioning your bets over time**.
- Never bet on emotion. The house edge is small, but your discipline makes or breaks you.
- Mikki Mase plays differently — he exploits dealer mistakes and shuffle patterns. You don't need to. This system wins through **volume and structure**.

SECTION 2: Betting Pattern

Structure + Logic Behind the System

This system uses a **fixed 6-step betting pattern**, paired with a **Martingale-style progression** (double after every loss).

It's not about reacting to previous outcomes — it's about **sticking to a pattern, managing risk, and resetting after each win**.

The Fixed Pattern

PLAYER → BANKER → PLAYER → PLAYER → BANKER → BANKER

- This sequence repeats indefinitely.
- It's designed to balance the natural edge of the **Banker bet** with the statistical noise of real-world outcomes.
- You're not chasing streaks — you're following a system built on risk distribution.

How to Use the Pattern

Situation	Action
 Win	Reset to Step 1 (Player), bet 1 unit again
 Loss	Move to next step in pattern + double your bet
 Tie	Repeat the same bet amount on the same side

 Example:

- Bet on Player (\$1) → **Lose**
- Bet on Banker (\$2) → **Lose**
- Bet on Player (\$4) → **Win** →  **Reset**

Full Step-by-Step Example

Step	Bet Side	Bet Amount	Outcome	Action	Running Loss
1	Player	\$1	✗	Move to 2	-\$1
2	Banker	\$2	✗	Move to 3	-\$3
3	Player	\$4	✓	Reset	+\$1 profit
1	Player	\$1	✗	Move to 2	-\$1
2	Banker	\$2	✗	Move to 3	-\$3
3	Player	\$4	✗	Move to 4	-\$7
4	Player	\$8	✗	Move to 5	-\$15
5	Banker	\$16	✓	Reset	+\$1 profit

➡ You *always* come out ahead by 1 unit when you win — that's the power of Martingale.

🔒 **Max Steps = 6 (Strict Rule)**

Step	Bet Multiplier	Bet Amount (Base \$1)
1	1×	\$1
2	2×	\$2
3	4×	\$4
4	8×	\$8
5	16×	\$16
6	32×	\$32
Total Risk: \$63		

⚠ **Never go past Step 6.** If you lose 6 in a row, **end the session**. That's the hard stop.

Why This Pattern Works

1. **Mathematically Balanced:** Alternates bets to smooth variance without falling into superstition or chasing.
2. **Risk-Limited:** 6-step cap ensures you never spiral out of control.
3. **Psychologically Stable:** Keeps you from second-guessing yourself or “playing hunches.”
4. **Always Ends With Profit:** Any win resets the cycle with net gain = +1 unit.

SECTION 3: Bankroll & Risk Management

“Don’t bet like a gambler. Bet like a machine.”

This system doesn’t win because it guesses right — it wins because it **outlasts the swings** and **forces profit** through structured exposure. That only works if your bankroll is built to survive 6-step losing streaks.

Step 1: Know Your Max Risk Per Cycle

Step	Bet Amount (Base \$1)	Running Total Risk
1	\$1	\$1
2	\$2	\$3
3	\$4	\$7
4	\$8	\$15
5	\$16	\$31
6	\$32	\$63

 Every 6-step cycle has a **max drawdown of 63 units**.

So if your base bet is:

- **\$0.50** → \$31.50 risk
- **\$1** → \$63 risk

- **\$5** → \$315 risk
- **\$10** → \$630 risk

🧠 Step 2: Use the 10X Rule (Minimum Bankroll)

To safely run this system over time, multiply your cycle risk by **10**:

Base Bet	Min Bankroll (10X Rule)
\$1	\$630
\$2	\$1,260
\$5	\$3,150
\$10	\$6,300

Why? Because variance is real. If you only have one bullet, you're not using a system — you're gambling.

🛑 Step 3: Set a Hard Stop

If you hit the 6th loss:

- **Do not** add another bet.
- **Do not** switch tables hoping for luck.
- **Do not** increase your base unit to "win it back."

✅ Just log the session as **-63 units**, and move on. You can make it back over the next few cycles.

📋 Step 4: Track Your Sessions

Professionals track data. Gamblers chase feelings.

Use a spreadsheet or notebook to log:

- Session #
- Start bankroll
- End bankroll

- Number of cycles played
- Number of -63 streaks hit
- Total profit/loss

This will keep you sharp and honest. Most players think they're doing well — **you'll know you are.**

SECTION 5: Advanced FAQs + Strategy Tweaks

“The system is fixed. You are the variable.”

? Q1: Why not just bet Banker every time?

A: Yes, Banker has a slightly better edge (1.06% vs 1.24%).

But **Dr. Greed’s pattern** isn’t based on pure math — it’s designed for:

- Smoother bet flow
- Lower volatility across cycles
- Psychological consistency (less hesitation)

In practice, switching between Player and Banker prevents you from “locking onto” losing streaks the way flat Banker betting might. You get **risk spacing**.

? Q2: What if I win multiple steps in a row — should I increase my base bet?

A: Not yet. Only scale your base unit when:

- You’ve had **10+ successful cycles in a row**, and
- You’re playing with **house money**, and
- Your **bankroll can handle a new 6-step drawdown**

✦ Until then, stay small. Getting greedy too soon is how systems die.

? Q3: What do I do if I win at Step 6?

A: Great — you just recovered all 5 losses and locked in 1 unit profit. Now:

- ✅ Reset to Step 1
- 🚫 Do NOT increase base unit (unless long-term plan says so)

? Q4: Can I skip to a later step if I think the outcome will flip soon?

A: No. That's **freestyling**, not system play.

Every deviation you make increases emotional risk. Stick to the pattern — the edge is in **discipline**, not prediction.

? Q5: What if the table feels “cold” — should I switch?

A: The system doesn't care about “cold” or “hot.” That's emotional noise.

Unless you're seeing **rigged behavior** (e.g. 12 ties in 40 hands), stay the course.

Mikki Mase switches tables based on real-time edge detection.

You don't have that — **you have a system**. Trust it.

✅ Pro-Level Tweaks

1. Session Caps

- Example: Play for **+5 units** or **-63 units max** per session.
- Keeps your risk predictable and emotional fatigue low.

2. Pattern Logging

- Track what step you're winning at most.
- Identify early if you're hitting losses too often at Step 4–6 (could suggest variance or rigged platform).

3. Cycle Streak Tracker

- Log: “How many wins in a row before a 6-step loss?”
- Helps adjust session pacing and expectations.

The Golden Rule

“This system doesn't work because it's magic.

It works because 99% of players break the rules — and you won't.”

Ready to Flip the Odds?

This system works. You've seen the structure, the math, and the discipline behind it.

Now all that's left is to **play it on a real table** not some random app with invisible cards.

- Live dealer
- Transparent play
- No withdrawal BS
